SANICARE HYGIENE STATION (SOLE DISINFECTION)

The SANICARE Hygiene Station disinfects your soles while you wash your hands. The disinfection bath is automatically refilled after each use and can be used continuously which allows the machine to conserve the chemical usage.

Dry your hands with paper towel, then place your hands into the cylinders and the disinfection process begins automatically. Once the hands are disinfected, the turnstile will release.

Machine Features

- Automatic refilling disinfection bath
- Reduces contamination risk
- Disinfectant level indicator
- Fitted with a drain

Machine Options

- Disinfection bath length: 39.4" or 59"
- Available in left or right entrances
